

## TecLines TAB Kitchen Connection Box

### Description

---

The TecLines kitchen connection box TAB001 is a universal installation aid for kitchen applications. It is used when the cooktop and oven are installed separately and not as a combined appliance. The kitchen connection box serves as a central power distributor for separately installed kitchen appliances and enables power supply via an existing cooker connection outlet. No additional installation of sockets is required, significantly reducing installation time and costs.

### Key features

---
