

TecLines TES021

3-Way Built-In Power Socket with USB-A + USB-C

Description

The TecLines TES021B 3-way built-in power socket with USB-A + USB-C is a functional furniture power socket designed for flush installation in worktops, desks, or kitchen furniture. Made from robust aluminium and plastic, the built-in power socket features a minimalist design and durable construction. With three Schuko sockets (230V AC, max. 16A / 3600W) and two USB ports, Type A + C (5V DC, max. 3.1A / 15.5W), it provides convenient connections for notebooks, monitors, smartphones, tablets, and other devices.

Once installed, the TecLines built-in power socket sits flush with the worktop. To connect devices, simply lift the cover. With an installation depth of only 39 mm, the socket requires very little space beneath the worktop. The 1800 mm power cable with Euro plug allows for flexible positioning. The low-profile built-in power socket is ideal for offices, conference rooms, home office workstations, kitchens, or workshops and provides a clean, tidy appearance without visible cables on the work surface.

Key features
