

TecLines TNH004 laptop holder with rechargeable suction cup

Description

The TecLines laptop holder with a battery-powered suction cup is the perfect solution for technicians, tradespeople, and service engineers who need to use their laptops directly at the job site. Whether on a construction site, in a workshop, or in a service vehicle, the holder provides a stable and flexible workspace without the need for drilling or screwing. The integrated, battery-powered suction cup ensures reliable grip on smooth surfaces such as glass, metal, plastic, or coated panels. Thanks to automatic vacuum control, the holding power remains constant, even if a pressure drop is detected. An LCD display with a pressure gauge provides continuous feedback on the suction power – for maximum safety during mobile use.

Key features

Suitable for:	Suitable for laptops up to approx. 17 inches
Suction plate:	8-inch suction cup, for smooth surfaces (glass, metal, plastic)
Holding power:	High vacuum holding power with automatic pressure regulation
Display:	LCD display with pressure gauge
Battery capacity:	4000 mAh lithium-ion battery
Charging port:	USB-A charger (included)
Swivelable:	360° rotation
Height adjustable:	330 mm
Tiltable:	+75°/-5°
